

## Moore Balance Brace (MBB)

## Description

This is a lightweight ankle stabilizer that is designed to help our elderly patients with their balance and stability. Typically, we find these patients are at risk for trips and falls. Being that falls cause directly or indirectly one-third of the deaths of patients over 65, it is important to make sure we can avoid falls. There is some mild flexibility to allow for normal walking and good motion at the ankle joint. However, by coming up over the ankle, increased stability is present. This brace will fit into almost all shoes because of its lightweight streamlined design.
